# Report of the Superintendent

---

To the School Committee:

I have the honor to submit my third annual report.

Chapter 17 of State Superintendent H. C. Morrison's last biennial report treats so admirably of elementary schools, especially rural schools, and the quality of work done therein, and these matters being so pertinent to the present school situation, I shall quote Mr. Morrison at some length. Nothing that I know of could bring before the attention of the people with greater force a line of thought so valuable as this.

## Quality of Work in the Public Schools.

"After we have got our children into school and kept them there, the matter of supreme interest is, 'What kind of work is done in the school?' And this question can not be answered with anything like the precision with which we answer questions relating to enrollment. The question of the quality of education is perhaps the most productive of endless dispute and disagreement of all our public questions. People are content to indulge in interminable races of opinion to which there can be no definite outcome. Educational science has not yet reached a stage at which precise measurements can be applied at all points to the work of the schools, although good progress is being made and in not a few respects very definite measurements can now be applied. Whatever I have to report in this chapter is based upon conclusions drawn from observation and inspection though not in all cases upon measured facts. Consequently, the report has simply the value which it may derive from public confidence in the credibility of the observer and in his competency in drawing conclusions.

"Whether in elementary or in higher schools the standard by which the work is judged is its capacity to produce active thinking in the pupils under instruction.

## The Elementary Schools.

"Elementary schools, and teachers, as we know them in this department, fall naturally into four groups, which I describe in the order of excellence from lowest to highest.

1. "We have the teacher whose highest conception of his or her office is the ringing of the bell, the assignment of lessons, keeping a semblance of order, and dismissing the school as soon as the time

of day will warrant. This school is very commonly "kept" by an ignorant, not infrequently semi-illiterate, person and sometimes worse, who is frankly engaged in keeping school for the meagre financial return involved and nothing more. Of course such a school is a school in name only. The children derive no profit, and, since it is sometimes rotten with immorality, it is a curse to the community rather than a blessing. Let us call these schools fourth class.

2. "Next in order though very much better than the schools of this lowest class, are those schools in which there are teachers whose consistent aim is in the direction of real teaching, but who lack the requisite knowledge of skill or address to make their teaching effective in the best sense. Such schools when properly supervised very commonly become good schools and even excellent schools. Without supervision, such schools are apt to become extremely insufficient, and not infrequently in effect but little better than those of the fourth class. We will call them third-class schools.

3. "Better than these schools ordinarily, but not so good as the best of the class last named, are a decreasing number of schools which are mechanical in type, usually in charge of veteran teachers who have never had any professional training and possessed of little or no insight into the principles of the educative process. Scholastically, the effect of schools of this type is very rarely stimulating to the pupils and very little genuine growth results. Pupils are apt to be well grounded in the three R's which is a good and eminently desirable thing, but they seldom show interest in their work, they seldom acquire much power to think, and they rarely acquire the broad and generous outlook on life which is on the whole the best gift which the public schools have to bestow. Discipline and moral tone in these schools is ordinarily better than in either of the preceding. I rate them as among our better schools, because they accomplish what they profess. It is very much better that children should behave themselves while in school and acquire a sound and effective grasp upon the three 'R's,' even if they do not acquire very much moral strength or much capacity to think, than that they should acquire none of these and still not conduct themselves well while in school, nor acquire an educated capacity for thinking. These are second-class schools.

4. "The best of all our schools are an increasing class taught by well trained teachers of native capacity, properly supervised, pursuing a program of study which is at least up-to-date, housed in buildings which are themselves calculated to stimulate and develop a refined taste in all that pertains to the material surroundings of life. Such schools very frequently fail to meet the exacting standards of the citizen who thinks that ability to measure a pile of wood and give its contents in cord feet is the foundation stone of education.

They very commonly fail to produce accomplished writers of English at the age of fourteen, but they do recognize the incidence of the impossible in education with an increasing degree of exactness, they do equip children with a fair capacity to think in terms of the world in which the children are going to live, and they do give children a broad outlook upon life which is at times surprising. In the so-called fundamentals, the children are taught and taught to think with a better grade of efficiency than has ever before been the case. Of course, the fourteen-year-old boy who has studied arithmetic which he will need to know and has omitted the arithmetic which has long ceased to have any concrete meaning, will not compare favorably with the country youth of twenty who once attended the 'common school' winters and ciphered on abstruse arithmetical gymnastics year after year with little or no attention to anything else, with a heart single to the purpose of acquiring the ability to 'stick the teacher,' when judged by the standards of the latter. But then, our youth of twenty would make a sorry figure in the eyes of competent and impartial judges if he were weighed in the balance with the modern fourteen-year-old, and judged by the standards of the latter.

"Our efforts for better schools can be summarized as efforts to eliminate schools of the fourth class, to transform schools of the third class into schools of the first class, and to replace schools of the second class with schools of the first class as opportunity is presented. To this end is all our training of teachers, our extension of supervision, our improvements in schools buildings, our conservation of child life."

### Comment on the Above Quotation.

It is a reliable, trustworthy, timely bit of educational literature from an entirely competent and experienced man familiar with schools in the state of New Hampshire. It shows what our schools have been, are, and what they ought to be. People who read it thoughtfully should have no difficulty in visualizing just such types of schools as it describes. We have all seen them. Three years ago our own schools were undeniably of the third class herein described. The question of supreme importance at this time is, "What are they now and what should be done to bring them wholly into the group of first-class schools?" There remains but one thing to bring about this very desirable end, namely, pay better salaries and hire better trained and experienced teachers. If this is done the schools of the town of Randolph should equal the best to be found in the state. It should be entirely unnecessary for parents to send their children to Whitefield to prepare for high school. Rural schools, equipped as well as ours are at present,

with the exception of the teacher, offer possibilities in education far exceeding those of the best city, "graded," systems.

Respectfully submitted.

J. E. WIGNOT,

Superintendent of Schools.

### Vital Statistics.

Whole number of pupils registered.....	21
Boys .....	12
Girls .....	9
Per cent of attendance.....	93
Number of pupils not absent or tardy.....	0
Number of cases of tardinesses.....	18
